

Planning the technical foundation

Step to define how to work e-commerce website

- A user visit the marketplace and research the product in frontend.
- The frontend make a request to the product detail API's ,we use sanity to make the product schemas and fetch the product detail in our frontend.
- When user places order, the order details are sent to sanity CMS via an API request where order is recorded.
- Use third party APIs to fetch shipment tracking information.
- Payment details are securely processed through the payment gateway, and a confirmation is sent back to the user and recorded in sanity CMS.

Workflow of e-commerce marketplace
